### **DETAILED ACTION**

This application is a 371 national stage filing of PCT/AU98/00020, filed December 16, 1998.

Claims 1-7 are pending and currently under examination.

#### ***Election/Restrictions***

Restriction is required under 35 U.S.C. 121 and 372.

This application contains the following inventions or groups of inventions which are not so linked as to form a single general inventive concept under PCT Rule 13.1.

In accordance with 37 CFR 1.499, applicant is required, in reply to this action, to elect a single invention to which the claims must be restricted.

Group I, claim(s) 1-6, drawn to a method for treatment of a subject comprising administering hematopoietic liver stem cells, and an additional suspension of cells selected from the group set forth in claim 1.

Group II, claim(s) 1-6, drawn to a method for treatment of a subject comprising administering hematopoietic spleen stem cells, and an additional suspension of cells selected from the group set forth in claim 1.

Art Unit: 1632

Group III, claim(s) 1-6, drawn to a method for treatment of a subject comprising administering both hematopoietic liver and hematopoietic spleen stem cells, and an additional suspension of cells selected from the group set forth in claim 1.

The inventions listed as Groups I-III do not relate to a single general inventive concept under PCT Rule 13.1 because, under PCT Rule 13.2, they lack the same or corresponding special technical features for the following reasons:

A) The invention has no special technical feature that defined the contribution over the prior art, or

B) Unity of invention between different categories of inventions will only be found to exist if specific combinations of inventions are present. Those combinations include:

- 1) A product and a special process of manufacture of said product.
- 2) A product and a process of use of said product.
- 3) A product, a special process of manufacture of said product, and a process of use of said product.
- 4) A process and an apparatus specially designed to carry out said process.
- 5) A product, a special process of manufacture of said product, and an apparatus specially designed to carry out said process.

In this case Smikodub *et al.* teach the treatment of acquired aplastic anemia with hemopoietic cells from human embryonic liver. See Lik Sprava. 1994 Mar-Apr;(3-4):104-8.

Art Unit: 1632

More generally, Touraine *et al.* teach *in utero* transplantation of stem cells in humans and the immunological aspects and clinical follow-up of patients. See Bone Marrow Transplant. 1992;9 Suppl 1:121-6. Applicant's claims encompass multiple inventions and do not have a special technical feature which link the inventions one to the other, and lack unity of invention. Additionally, the allowed combinations do not include multiple products, multiple methods of using said products, and methods of making multiple products as claimed in the instant application, see MPEP § 1850. In this case multiple products and multiple methods are specifically set forth.

The inventions above are independent and distinct, each from the other. They have acquired a separate status in the art as a separate subject for inventive effect and require independent searches. The search for each of the above invention is not co-extensive particularly with regard to the literature search. Further, a reference which would anticipate the invention of any one Group would not necessarily anticipate or make obvious any of the other groups.

For these reasons restriction for examination is proper.

Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed (37 CFR 1.143).
